

Advanced all-in-one self-config API server

- Fast to learn environment for creating custom integrations using industry standard JSON/REST format interactions with an embedded OpenAPI spec that is consistent with the version of the API Gateway so the documentation is always up to date
- Prescient API server and hardware included in all-in-one package ready for development or production environments. No more custom servers or networking misconfigurations!
- Secure integration with Prescient controllers through mTLS and best in class integrity checks
- One destination for all things API; monitor events from your API sites, configure webhook endpoints and manage API tokens from NIDAC's custom edge solution

Webhook based event reporting

Certificate and token secured API's

Enable integration business models and turnkey solutions
